

Methodology

Exchange will be doing latency testing on every 2nd Saturday (except Mock Saturday) of each quarter or whenever there is a change in the network architecture. The results indicating Min, Max and Average would be published on the website. This latency testing will be performed using Network path latency tool between the reference rack located at Co-Location and Core router at Exchange with following test parameters under no load condition:-

Packet Rate	1,00,000 packets per second
Frame Size	256 bytes
Time interval	60 seconds

Reference Path Latency as on 29th December 2018.

Latency in nano seconds		
Minimum	Maximum	Average
16092	22940	16903
