

Rationalization of real time package on the basis of variable users

Based on the market participants' feedback, DotEx is pleased to announce rationalization of real time package on the basis of variable users. DotEx permits data vendors who subscribe to the Level 2 or Level 3 real-time data, to derive lower level of data for redistribution. In this case, the free users shall be limited to 300 across all data levels.

This will be effective from 1st October 2014.
